

## XXIV AISSEC Scientific Conference

### Economic Development in the Era of Geopolitical Fragmentation

Marche Polytechnic University, Ancona, Italy

8-9 June 2026

#### Call for Papers

After decades of deepening global integration, the world economy is now shifting toward growing geopolitical fragmentation. This fragmentation is inherently multifaceted, manifesting in disruptions to political alignments, trade, finance, scientific cooperation, and mobility, among other domains. Amid these shifts, Artificial Intelligence has emerged as a critical frontier for both economic development and strategic competition.

This conference invites scholars and practitioners to explore the intersection of these structural transformations and the role of transformative technologies in shaping an increasingly multipolar world, while maintaining a focus on the core challenges of economic development. We welcome the submission of theoretical and empirical contributions addressing (but not limited to) the following topics:

- Innovation
- Productivity
- Trade/value chains
- Migration
- Digitalization
- Artificial intelligence
- Climate change
- Military conflicts
- Socioeconomic inequality
- Demographic transition
- Social norms and values
- Institutions

A comparative perspective is expected to enrich the debate and has traditionally been favored by the organizers.

#### Keynote Speakers:

- Mariapia Mendola (University of Milano Bicocca)
- Klaus Prettner (Vienna University of Economics and Business)

The working language of the conference is **English**.

Young researchers and PhD students are encouraged to apply and will be able to benefit from lower fees.

#### Fees (including biennial membership and social dinner)

	Early bird registration	Late bird registration
Regular	200	230
PhD and Postdoc	150	180
